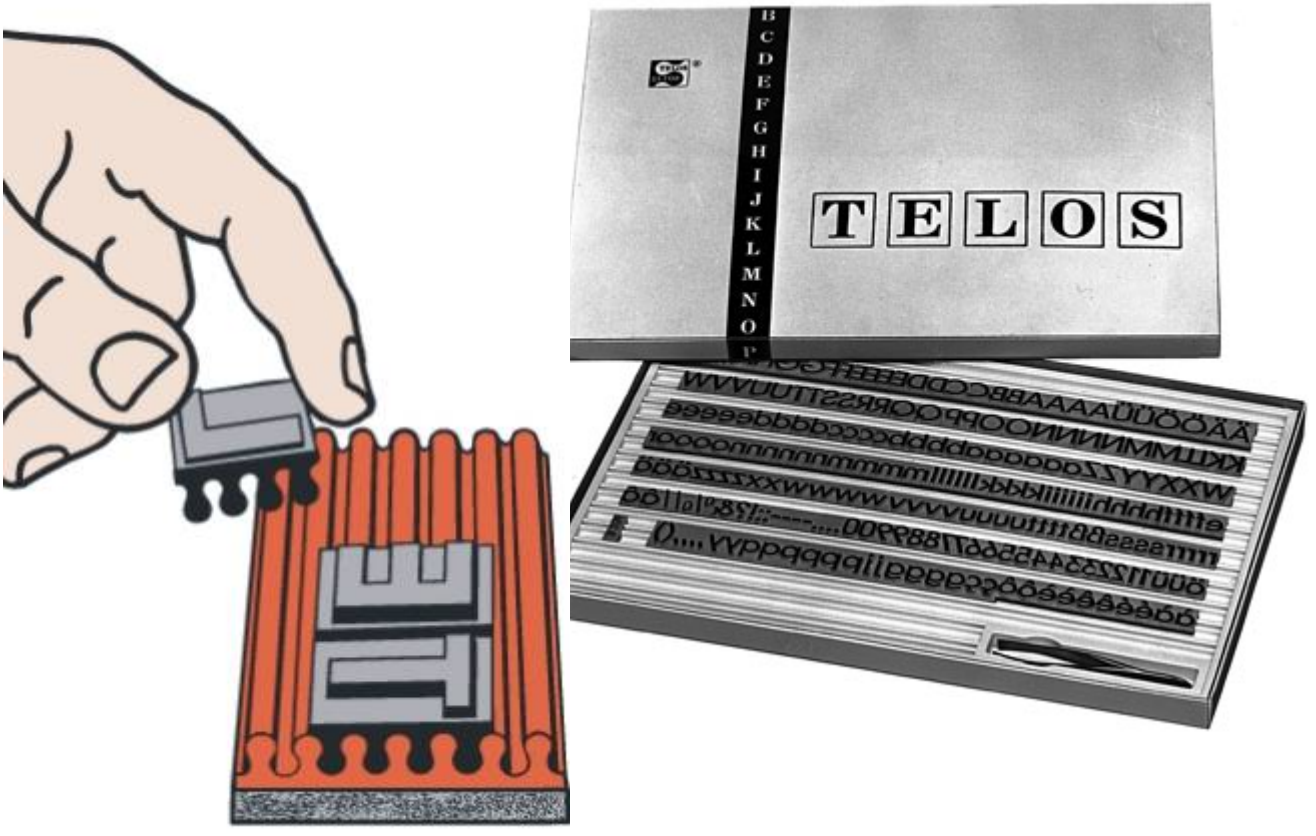
The principle:

The rear side of the TELOS-types and also the surface of the TELOS-base plate – both made of rubber – have a standardized rib-profile that fits exactly into each other.

Advantages:

- Easy and fast exchange of the printing types.
- Various character heigths and versions available.
- Texts, logos and signs can be set individually.


The TELOS-system is available in many different versions and for different applications.
A suitable compilation of single types are our TELOS-sets. These are available in different sorts (characters, numbers, punctuation marks) packed clearly in cardboard boxes.
