

# TECBOND

**TECBOND** hotmelts are 100% solid, non-toxic adhesives containing no solvents or water. They are manufactured in rigid stick, slug or cartridge form to exacting standards in our own modern factories. Easily loaded into hand-held glue guns, they flow when the trigger of the gun is gently squeezed. The solid adhesive is pushed into a heated chamber, and extrudes from the nozzle as molten adhesive.

Hotmelt adhesives provide instant, permanent bonding on a vast range of materials without the use of harmful solvents. They are ideal for fast repetitive gluing applications.

Molten adhesive is applied by a hand held glue gun to one surface, the parts pressed together, and a bond or seal is made instantly. The adhesives are easy to store and have virtually unlimited shelf life. With over 25 formulations to choose from, there is bound to be a solution to your application.

Just look at some of the benefits of using a shaped hotmelt system for industrial applications:

- \* Reliable Instant Bonding
- \* Economic and Simple to Use
- \* Suitable for a Vast Range of Substrates
- \* Non Toxic and Solvent Free

More than just a glue!

**TECBOND** hotmelts have a wide range of uses including:

- \* Packaging and Carton Sealing
- \* Potting and Encapsulation (e.g. electronics)
- \* Sealing, Gap-filling, and Reinforcing
- \* Coating and Insulating
- \* Vibration Restraint & Cushioning of Components
- \* Anti-slip (e.g. pallet stabilisation)
- \* Repair or Assembly
- \* Decorate and Create

and many more!
